RETHINKING SOCIAL ECOLOGY IN A DIGITAL LANDSCAPE

November 24th-26th, 2025

**Venue: Siksha 'O' Anusandhan (Deemed to be University)
Bhubaneswar, Odisha, India**

Organised by

**Society of Extension Education, Agra
Siksha 'O' Anusandhan, Bhubaneswar, Odisha
Central University of Odisha, Koraput, Odisha**

The digital age has woven a complex web around our lives, fundamentally altering how we interact with each other and the environment. Social ecology, traditionally focused on the intricate dance between human societies and their natural surroundings, now waltzing to a new rhythm – the frenetic clicks, swipes, and shares dominating our digital world. The digital age has irrevocably transformed the way we interact with each other and the environment. Our social spheres have expanded beyond physical borders, woven into a complex tapestry of online communities and interactions. This digital landscape presents both unprecedented challenges and opportunities for the field of social ecology. Traditional social ecology focuses on the intricate relationship between human societies and their natural surroundings. However, the rise of social media, ubiquitous computing, and the constant hum of the virtual world necessitate a fundamental re-evaluation of these dynamics. How do “likes” and “shares” translate into real-world environmental action? Can online communities foster a sense of stewardship for the planet, or do they exacerbate our disconnect from nature?

This exploration delves into the heart of social

ecology in the digital age. We need to dissect the intricate web of online interactions, unpacking how they influence our perception of the environment and our capacity for collective action. Also, the potential of technology to bridge the gap between awareness and activism, fostering a sense of global responsibility for our shared biosphere has to be explored. But we must also confront the potential pitfalls – the echo chambers, misinformation, and the seductive allure of the virtual at the expense of the real.

This new landscape presents a fascinating paradox. On the one hand, social media platforms connect us like never before, fostering online communities and raising awareness about environmental issues at lightning speed. On the other hand, these same platforms can create echo chambers, exacerbate social inequalities, and distract from the tangible actions needed for real change.

Rethinking social ecology in this digital landscape is no longer optional, it's imperative. This exploration delves into the intricate connections between our online and offline worlds, examining how technology shapes our relationship with the environment. The congress will provide a platform to dissect the potential of digital tools for environmental activism while acknowledging the challenges they pose. Ultimately, seek to bridge the gap between online engagement and real-world impact, fostering a future where social media becomes a springboard for sustainable action, not a breeding ground for apathy.

Themes of the Congress
